Election/Restriction

The Restriction Requirement under 35 U.S.C. 121 is reconsidered to one of the following inventions:

- I. Claims 1-15, 24, 25, drawn to CYP3A inhibitors alone and in combination with a drug, and methods of use thereof, classified in various subclasses of class 514, depending on the compounds contemplated.
- II. Claims 17-19, drawn to CYP3A enhancers and methods of use thereof, classified in various subclasses of class 514, depending on the compounds contemplated.
- III. Claims 20-23, drawn to methods for prolonging a therapeutic effect comprising administering a cytochrome P450 3A (CYP3A) inhibitor, classified in various subclasses of class 514, depending on the compound contemplated.

The inventions are distinct, each from the other, for the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to CYP3A inhibitors and CYP3A enhancers, compounds exhibiting opposite activities.

Inventions I/II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of

Art Unit: 1614

operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to different methods of use.

In addition to the reasons given above, the inventions are distinct because they have acquired a separate status in the art, as recognized by their distinct subject matter and separate classification of the compounds. Accordingly, restriction for examination purposes, as indicated, is proper.

Further, Claims 1, 3 and 5-25 are generic to a plurality of disclosed patentably distinct species comprising various cytochrome P450 3A (CYP3A) inhibitors and cytochrome P450 3A (CYP3A) enhancers, in addition to a first-pass effect drug, as disclosed in the subject specification. Applicants are required under 35 U.S.C. 121 to elect single disclosed species, depending on the Group elected, even though this requirement is traversed.

It is noted there was no response to the request for elections of species in Paper No. 4, filed April 11, 2003.

Should Applicants traverse on the ground that the species are not patentably distinct, Applicants should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the Examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 1614

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicants are advised that to be complete, the reply to this requirement must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Any inquiry concerning this communication should be directed to Phyllis G. Spivack at telephone number 703-308-4703.
